Cisco DX70 or 80: Setting up for NHS networked use v1.5

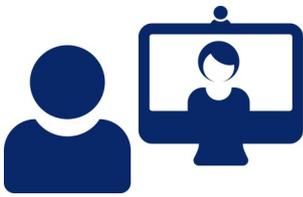

Please contact vc.support@nhs.net giving the MAC address of any system you wish to register. The MAC address allows us to set your dial-in number correctly. You will be sent a 4-digit PIN number to be used to unlock the screen. This is required for the final part of the set-up.

Your DX **must** have a valid, unused, 10.247.*.* IP address (along with appropriate gateway, subnet and DNS settings). If your board uses dedicated network ports for its video conference devices (a specific VLAN) then you must attach your DX to one of these network ports or ask for the one you intend using it on to be enabled for this purpose.

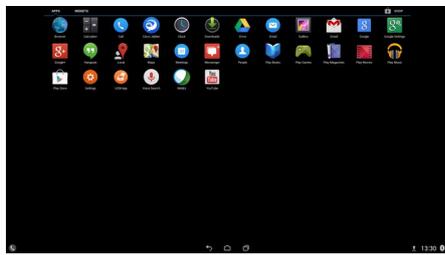

Once this is in place please connect the DX to your network and power it on.

N.B. We only allow video devices on this network address range. Your ability to use Android apps will be disabled once your device has registered.

	<p>If you are required to enter a static IP address for your network you will probably see a screen saying you are unable to connect to a network. Tap Cancel</p>
	<p>Tap Get Started on the first Welcome Screen then tap OK on the next screen.</p>
	<p>At the top RHS of the screen you'll now see 6 small white dots.</p>

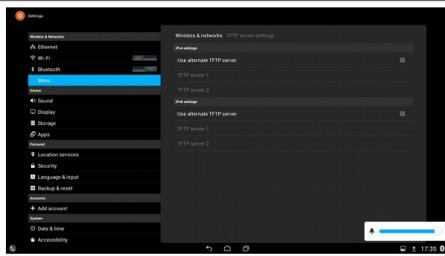

National Video Conferencing Service

Tap the dots (and OK again if you're asked on the next screen) then **tap Settings** (round orange icon).

Tap IPv4 configuration. Tick Use static IP (unless your board uses DHCP and NAT addressing). Enter your network details and **tap Save**

On the left hand menu, still within Settings → Wireless & Networks **tap More...** then **TFTP server settings**. **Tap the box** to insert a tick for **use alternative TFTP server**. **Tap Continue** when asked about a Trust list and enter **10.247.96.242** for TFTP server 1 and again for server 2.

Tap the home button (a small house shaped icon at the bottom of the screen) and wait. Assuming your system and the addresses entered are not caught by your firewall rules your system will automatically register with our infrastructure and you will see a 6-digit number appear at the bottom left hand side of your screen after a few minutes. During this process your device may restart and you may be asked to enter an unlock PIN. Please use the one supplied in your email from vc.support. Once you see your device with a 6-digit number please contact VC Support to be assigned your full 9-digit number after which you will be able to make and receive calls to our other systems.
